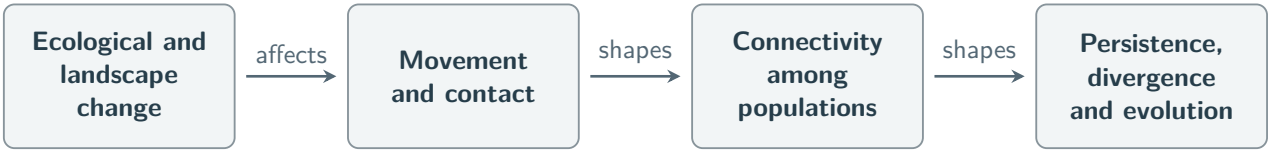
Systems across scales

Rows are study systems and columns are scales. Solid outlines mark a published paper at that scale; dashed outlines mark collaborative or unpublished work; a blank cell shows none.

	Within individuals	Between individuals	Across populations
FMDV in African buffalo	Virus growth and immune response	Transmission between buffalo, including carrier infection	Collaborative cells-to-landscapes project; my role is within-host models
CCHFV in livestock and wildlife	Antibody response in livestock	Transmission between livestock and wildlife hosts	
Human cultural transmission		Transmission of cultural traits; networks and clusters	Cultural variation across geography and language
Bighorn sheep immune ecology	Immune phenotypes of individual sheep		Immune variation among metapopulations


Landscape and metapopulation eco-evolutionary dynamics
