VBPCApy

Observed entries inform a variational low-rank model.

Incomplete data

Filled = observed
Dashed = missing

Variational low-rank model

Latent scores and loadings
Bias, observation noise and ARD priors
Approximate posterior covariances

Fitted-data summaries

Reconstruction / training scores
Predictive means and variances

Model assessment

Convergence diagnostics
Rank / held-out checks

Fitting uses observed entries. Uncertainty is a variational approximation. Coverage and rank recovery need checks for the intended data and observation assumptions.
